NOTES:

** Double astericks indicate plants grown from seed collected responsibly from wild colonies on our property in Washington, PA (Ecoregion 70a).

PA Letters in the Ecoregion column (PA, VA, NY) represent plants grown from seed collected somewhere in that state.

64a Numbers in the Ecoregion column represent a much more refined geographic area indicating the plant's provenance. For example, 64a is the Triassic Lowlands ecoregion.

PA, 64a A combination of state abbreviation and ecoregion number means there will be different crops available. Some plants will be grown from PA Ecotype seed, while pots labeled with an Ecoregion number represent those grown from plugs whose provenance is from that region.

Click the link below to view a detailed ecoregion map.

<https://www.epa.gov/eco-research/ecoregions>

* A single asterick in the Ecotype column means the exact provenance of the seed/plant is unknown. The long-term goal is to add more plants of known provenance, especially local ecotypes.

[HYPERLINK](#) Click on the scientific name of underlined species to be taken to a Plant Fact Sheet. New links are being added weekly. Click the hyperlink to the left to go see all fact sheets.

SHRUBS Species listed here are ones that are already being overwintered at the nursery. Some are plugs that will be potted up in spring. Others are in 1qt to 1 gallon sizes. The goal is to have a large spring tree/shrub sale with many more species that will be added to the list closer to the sale event in the spring.

WISHLIST **IMPORTANT! This spreadsheet is NOT an order form!** It is simply to let you know the species planned for 2023. The wishlist column allows you to check off which plants you may be interested in for your own personal reference.

PLEASE NOTE: This plant list will be updated frequently between now and April/May. Seeds can fail to germinate, whole crops of certain species may be unsuccessful, and tender young seedlings can be destroyed by late frosts. I will do my best to follow through with the species planned for the upcoming growing season, but can make no guarantees.
